

## Recent results of neutrino interactions from the T2K Near Detector

Neutrino-nucleus cross-section measurements in the GeV regime are crucial for future accelerator-based precision neutrino oscillation measurements. The T2K Near Detector has provided important results for the study of nuclear effects in neutrino-nucleus interactions and therefore stringent constraints on model development. In this talk, I will present our recent cross-section measurements, highlight on-going progress and discuss future possible developments in T2K.
