

Future measurement opportunities

- Hardware for future experiments :
 - Detector R&D : MAPS, Thin-gap GEMs,...
 - Polarized target
 - Streaming readout to increase event/rate
- Theory contact list and experimentalist contact list ?
- Future experiments in old theory paper ?
=> Theory developed faster than experiment.
- Complementarity JLab 22 GeV – EIC :
 - Diffractive processes suppressed at EIC but JLab 22 in a sweet spot.
 - Andrei : « Check the meson part in DVMP at EIC »
