

Discussion: Compton-like reaction, multichannel fits, CFF/GPD analysis

- **Diffractive $2 \rightarrow 3$ processes for GPDs**

What is their potential? What developments are needed? Power corrections?

- **Timelike Compton processes**

What can they contribute to CFF/GPD analysis? What developments are needed?

- **Multichannel CFF/GPD analysis**

What are presently the main limitations? What developments are needed?

Role of TCS? $2 \rightarrow 3$ processes for x-dependence?

Role of Lattice QCD information?

- **Double-virtual DVCS**

What is needed to advance it?
